Professional Summary

DevOps Engineer with 4+ years of experience specialising in Kubernetes, Docker, Cloud Infrastructure, and CI/CD automation for large-scale hybrid cloud and on-premises environments. Proven track record at **Jio Platforms Limited** delivering zero-downtime PAN-India 5G containerisation and lifecycle management through **MANO** and **CNOPS/FluxOPS**, while deploying and managing enterprise platforms such as **Jio Vault** and **Jio-AIaaS**. Experienced in architecting hybrid cloud environments and building scalable, highly available, and automated infrastructure. Skilled in bridging development and operations to deliver reliable, production-grade solutions across telecom, enterprise, and Generative AI workloads.

Technical Skills

Container Orchestration: Kubernetes (EKS, on-prem), Helm, ArgoCD, Docker, Docker Swarm
Cloud & Infrastructure: AWS (EC2, EKS, ELB, IAM, S3, VPC, Auto Scaling), on-premise private cloud
CI/CD & IaC: Jenkins, GitHub Actions, GitLab CI/CD, Terraform, Ansible, CloudFormation
AI/ML Ops: LLM deployment, RAG pipeline orchestration, GPU workload scheduling
Monitoring & Security: Prometheus, Grafana, ELK Stack, Kibana, HashiCorp Vault, SonarQube, Trivy
Languages & OS: Python, Bash, Linux (Ubuntu, CentOS, RHEL)
Collaboration & Project Management: Git, JIRA, Confluence, Phabricator, OS Ticketing Tool

Professional Experience

- | | |
|--|--|
| DevOps Engineer / Deputy Manager
<i>Jio Platforms Limited</i> | Feb 2023 – Present
<i>Navi Mumbai, India</i> |
| <ul style="list-style-type: none">• AIaaS Platform (LLM/RAG) – Architected and managed Jio’s internal AI-as-a-Service (AIaaS) platform deployed and operated multiple Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG) pipelines end-to-end — from model serving and GPU workload scheduling using Docker containers to configuration, integration testing, performance benchmarking, and production rollout.• Kubernetes & Container Orchestration – Designed and administered production-grade Kubernetes clusters (on-premise and AWS EKS) for telecom and AI workloads implemented Helm chart templating, ArgoCD GitOps workflows, and horizontal pod autoscaling to achieve 99.9%+ platform availability.• 5G PAN-India Containerisation – Led migration of critical 5G workloads to Docker & Kubernetes with zero downtime across public cloud and on-premise environments designed and maintained clusters for telecom-grade high availability.• MANO & Enterprise Platforms – Managed the internal MANO (Management and Orchestration) platform for production deployments, lifecycle management, and operational support of 5G Network Functions across PAN India on hybrid infrastructure.• CI/CD Pipelines – Built and maintained Jenkins and GitLab CI/CD pipelines for microservices across hybrid cloud reduced average deployment cycle time and improved release consistency through pipeline standardisation and automated quality gates (SonarQube, Trivy).• Infrastructure as Code – Automated AWS and on-premise infrastructure provisioning with Terraform (EC2, EKS, IAM, S3, VPC, Auto Scaling) and Ansible configuration management across thousands of Linux worker nodes developed Python/Bash tooling to eliminate repetitive manual operations.• Observability – Implemented Prometheus + Grafana monitoring dashboards with proactive multi-channel alerting and ELK Stack centralised logging reduced mean time to resolution (MTTR) for production incidents.• Mentorship – Coached junior and mid-level engineers on Kubernetes, CI/CD, Linux, and DevOps best practices conducted internal workshops and code/config reviews. | |
| DevOps Engineer (Consultant)
<i>Quess Corp Limited</i> – Client: Jio Platforms Limited | Jun 2022 – Feb 2023
<i>Navi Mumbai, India</i> |
| <ul style="list-style-type: none">• Built and managed AWS environments (EC2, IAM, S3, EKS) and implemented end-to-end CI/CD pipelines with Infrastructure as Code practices, accelerating software release cycles and reducing manual provisioning effort.• Performed proactive monitoring, system health checks, root cause analysis, and documentation for production systems to maintain SLA compliance.• Containerised legacy microservices using Docker and deployed workloads on Kubernetes, improving resource utilisation and deployment repeatability. | |

Projects

- Jio AIaaS – LLM & RAG Platform (Production)** | *Kubernetes, Helm, ArgoCD, Python, Docker* 2023 – Present
- Designed end-to-end deployment architecture for Jio's **AI-as-a-Service** platform serving internal business units onboarded and operated multiple LLMs (open-source and proprietary) with GPU-aware Kubernetes scheduling.
 - Built and maintained **RAG pipelines** — document ingestion, vector store integration, embedding model serving — with full CI/CD automation for model version rollouts and A/B testing.
- CNOPS / FluxOPS – 5G Core Network Operations Platform** | *Linux, Docker, Python, Ansible* 2023 – Present
- Managed and supported **CNOPS (Core Network Operations Platform)** and **FluxOPS**, Jio's in-house platforms for lifecycle management of **5G Network Functions** across PAN India.
 - Executed production **upgrades, downgrades, rollbacks, and patch deployments** for critical 5G core network services while ensuring high availability and operational reliability.
 - Automated operational workflows and deployment activities using scripting and infrastructure tooling, improving deployment consistency and reducing manual effort.
- MANO – 5G Network Function Lifecycle Management** | *Docker, Ansible* 2023 – Present
- Managed the internal **MANO (Management and Orchestration)** platform responsible for deployment, lifecycle management, and operational support of **5G Network Functions** across PAN India.
 - Executed production onboarding, scaling, upgrades, downgrades, and rollback operations for telecom network services while maintaining high availability and service continuity.
 - Automated deployment and operational workflows using Mano tool, improving deployment consistency and reducing manual intervention in day-to-day operations.
- Jio Vault – Enterprise Storage Platform Deployment** | *Microservice Architecture and MongoDB, Elasticsearch, Redis, Neo4j*
- Deployed and managed the complete **Jio Vault** platform architecture across **LAB, IoT, IDC, and Azure Pre-Production** environments, including deployment and validation of multiple microservices.
 - Performed end-to-end deployment, configuration, and health verification of backend services including **MongoDB, Elasticsearch, Redis, and Neo4j**, ensuring reliable communication between microservices.
 - Integrated **Google Drive** with the **JVS Google Drive Integration Microservice** to enable secure cloud file synchronization and enterprise document management.
 - Executed deployment, scaling, upgrades, rollbacks, troubleshooting, and post-deployment validation of **JVS microservices**, ensuring high availability and seamless service delivery across environments.
- Hybrid Cloud Kubernetes Platform** | *AWS EKS, Terraform, Helm, ArgoCD, Jenkins, SonarQube, Trivy* 2023 – Present
- Provisioned and managed **AWS EKS clusters** with Terraform IaC implemented **GitOps workflows** using ArgoCD for declarative, audit-ready continuous delivery.
 - Integrated **SonarQube** static analysis and **Trivy** container vulnerability scanning into Jenkins pipelines, enforcing security quality gates before every production release.
 - Configured Kubernetes **RBAC**, network policies, and **HashiCorp Vault** integration for secrets management across multi-tenant namespaces.
- Infrastructure Automation** | *Python, Bash, Ansible, Terraform, Prometheus* 2022 – Present
- Built Python/Bash automation utilities to streamline cloud and on-premise operations, including node provisioning and health monitoring.
- Centralised Observability Stack** | *Prometheus, Grafana, ELK Stack, Kibana* 2023 – Present
- Deployed and maintained a centralised observability platform ingesting metrics and logs from **Linux worker nodes**, Kubernetes pods, and cloud services.
 - Built executive-level and SRE-level Grafana dashboards configured Elasticsearch index lifecycle management for cost-effective log retention at large scale.

Education

- Bachelor of Technology – Computer Science and Engineering** 2018 – 2021
Dr. Babasaheb Ambedkar Marathwada University Aurangabad, India
- Polytechnic Diploma – Computer Science and Engineering** 2015 – 2018
Matoshri Pratishthan's School of Management Nanded, India

Certifications

AWS Cloud Migration — **Google Cloud Platform Fundamentals** — **Elasticsearch 8 & Elastic Stack Build Automation & Continuous Integration** — **DevOps and Git Foundations** — **Introduction to Cybersecurity**
