Experience

Engineer
Atos
08/2025 – Present

Vulnerability Management & Compliance Assessment – Banking Domain

- Sound knowledge in Vulnerability Management Lifecycle.
- Conducted large-scale vulnerability scans using Rapid7 InsightVM across 100K+ assets (Windows, Linux, Network devices) and collaborated with cross-functional teams to drive timely remediation.
- Analyzed scan results, identified false positives, and prioritized vulnerabilities based on risk, CVSS scoring, and business impact.
- Generated and presented vulnerability reports, dashboards, and metrics for stakeholders and management.
- Performed CIS benchmark assessments across Linux (RHEL 7/8/9), databases (Oracle 19c, MySQL, MSSQL, PostgreSQL), and ESXi hypervisors to identify security misconfigurations and ensure compliance.
- Deployed and configured **Rapid7 Cloud Agents and scan assistant** across diverse environments to enable continuous vulnerability assessment, and proactively tracked agent health and coverage for effective risk management.
- Developed and optimized **SQL queries** to generate detailed security reports, providing actionable insights and enhancing vulnerability management processes.
- Leveraged ServiceNow, CMDB, and Confluence to manage vulnerability tracking, asset validation, documentation, and exception handling, ensuring SLA adherence, compliance, and audit readiness.

Technology Analyst
Infosys
09/2021 – 07/2025

Cybersecurity Analyst for US-based manufacturing company and US-based restaurant company

- Conducted regular vulnerability assessments using tools like Rapid7, Qualys, Tenable and reviewed penetration testing reports to identify security weaknesses in systems, networks, and applications.
- Analyzed vulnerability data, prioritized risks based on criticality and impact, and provided actionable remediation recommendations to stakeholders.
- Recommended strategic **scanner deployment** to minimize **network hops** between scanners and assets, resulting in improved scan reliability and reduced latency.
- Identified **scanning inefficiencies** due to scanners not being geographically aligned with target assets in Rapid7 InsightVM, and recommended relocating scanners to improve scan accuracy and performance.
- Implemented and managed email security solutions using Mimecast, enhancing threat detection, phishing protection, and data loss prevention across the organization.
- Performed SOC L1 monitoring activities using Exabeam SIEM, including alert analysis, triaging security incidents, investigating anomalies, and escalating potential threats as per defined procedures.
- Worked in asset onboarding, scanning, report generation, and **authentication failure** analysis.
- Conducted scans using **Tenable** to assess vulnerabilities on cloud assets, including network scans and web application scans (WAS), and collaborated on remediation efforts.
- Monitored daily threats using threat intelligence websites such as Hacker News, Bleeping Computer, Security Affairs, and CISA, while sharing advisories with clients.

Education

Bachelor of Technology – BTech, Information Technology
Dr. Babasaheb Ambedkar Marathwada University, Aurangabad
06/2017 – 06/2021

Key Achievements

CIS Compliance Automation & Script Customization

Engineered and customized CIS Bash scripts within Rapid7 InsightVM to align compliance checks with organizational requirements, improving accuracy of security validations across Linux environments.

Enhanced Security Monitoring and Response by Integrating Rapid7 API with Exabeam

Successfully integrated Rapid7 API with the SIEM tool Exabeam to enhance security event monitoring and response capabilities.

Enhanced Security Posture

Improved security posture by reducing vulnerabilities by 70% within 6 months.

Incident Management Efficiency

Successfully tracked and closed 100% of incident investigations within SLA.

Summary

- Over **5+ years** of IT experience in Cybersecurity with a focus on **Vulnerability Management**.
- Experienced with various tools including **Rapid7, Tenable, Qualys**, HP Network Automation, Confluence, Prisma, CMDB, Cisco AMP, Talos, Cisco Umbrella, Microsoft Defender, Joe Sandbox, ServiceNow, Exabeam, CrowdStrike, and Mimecast.
- Conducted security scans using various tools to identify and analyze vulnerabilities, coordinating with respective teams for remediation.
- Expert in understanding root cause and remediation of vulnerabilities, liaising with stakeholders to ensure closure.
- Conducted weekly calls with clients and various remediation teams.
- Prepared and scheduled daily, weekly, and monthly reports.
- Provided 24×7 operational support.
- Capable of self-directed learning through available documentation and vendor support resources.
